New **CrownPoint** Design Carbide

The CrownPoint carbide design is a hybrid of the Hemispherical and the Semi-ballistic design. The CrownPoint carbide composition is a hard grade like the Hemispherical design. It also has an aggressive shape similar to the Semi-ballistic carbide that provides a higher penetration rate. The CrownPoint carbide's design offers dual benefits – it will have a higher penetration rate than the Hemispherical carbide and will offer longer service life versus any Ballistic shape.

SEMI-BALLISTIC

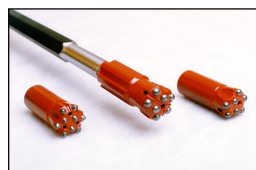

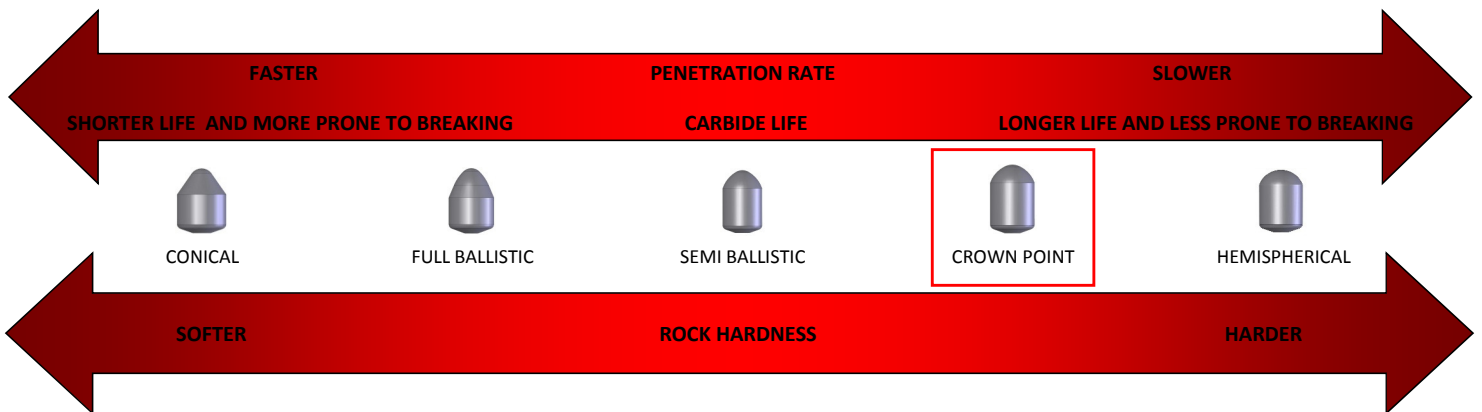

- » Softer Grade Composition
- » Faster Penetration Rate
- » Shorter Service Life

CROWNPOINT

- » Hard Grade Composition
- » Fast Penetration Rate
- » Standard Service Life

HEMISPHERICAL

- » Hard Grade Composition
- » Standard Penetration Rate
- » Longest Service Life
